Dear Hiring Team,

I embed with a customer, map the real operating loop, and ship production software that makes the product work there — clinic, shop, and brand deployments, not demo sandboxes.

At BariAccess I sit inside Bariatric Associates as one of two primary engineers on TREI, a GLP-1 and metabolic-care platform: patient site, iPhone app, staff console, API, and a fail-closed Azure OpenAI assistant. The work is last-mile: identity, consults, membership, wearable custody, and changing the product when office workflow disagrees with the first design.

The same loop shows up at Alex Road Service — a public site plus 20+ ops screens, then intake, UAT with real staff, role-based training, and hypercare so the platform can be duplicated for the next shop — and at Insightful Care, a live telepsychiatry site for a New Jersey practice.

I am looking for a Forward Deployed Engineer seat where the job is to make the product true in someone else's building. I would welcome a conversation.

Sincerely,

Zakiy T. Manigo
