Dear Hiring Team,

I take a feature from client through API, data, and deploy. I am comfortable on web, iOS, serverless, and a real API/Postgres stack — same account, same source of truth, both surfaces.

At BariAccess I ship vertical slices across a TypeScript monorepo: Fastify API, PostgreSQL, worker and outbox, Expo iPhone app, React staff console, and the public patient site. Shared identity, server-owned Today / Plan / Progress on the phone, and staff views authorized against Postgres row ownership are one product, not three codebases.

The same pattern shows up in TaxTacker (React web + Expo iOS/Android, Stripe and store IAP, CI) and in shop and clinic sites that have to stay live after the first demo.

I am looking for a Full-Stack Engineer seat where the work is a vertical slice, not a single layer. I would welcome a conversation.

Sincerely,

Zakiy T. Manigo
