Dear Hiring Team,

I turn an unclear product need into contracts, code, and a release that stays honest when vendors, clocks, and users misbehave. Strongest on TypeScript product systems; I also ship Swift, React Native, and Firebase/Azure.

At BariAccess I build production TypeScript across API, worker, website, staff console, and iPhone client for a clinic-real GLP-1 product. Features land behind tests, CI, schema migrations, and fail-closed release gates. The ordinary hard problems are the job: delayed creates, event ordering, disconnect vs outage, webhook idempotency, stale-load guards.

I have also shipped live sites and apps for a roadside shop, a telepsychiatry practice, and a tax-record product, plus a SwiftUI fashion app on Firebase/GCP. I do not claim sole authorship of any of these platforms.

I am looking for a Software Engineer seat where production honesty matters more than a demo. I would welcome a conversation.

Sincerely,

Zakiy T. Manigo
