Dear Hiring Team,

I sit with users, shape the workflow, and ship the smallest honest version. Product decisions get encoded as gates — what is visible, what is deferred, and what the software is not allowed to invent.

At BariAccess I built TREI inside a bariatric practice's real onboarding: intakes, remotes, membership, staff admission, and daily program work. First-release decisions live in the software — Free Basic vs Path A, preparation readiness, patient language rules, Healthspan hidden until destination release — and public surfaces stay fail-closed. I partner with a scientific/product counterpart rather than acting as a PM.

The same habit shows up at Alex Road Service and Insightful Care: sit with the operator, cut the workflow to what staff will actually run, then ship.

I am looking for a Product Engineer seat where the job is to make the product smaller and truer. I would welcome a conversation.

Sincerely,

Zakiy T. Manigo
