September 21, 2026

Dear Hiring Team:

I am writing to apply for a Forward Deployed Engineer role. I embed with a customer, map the operating loop they actually run, and ship production software that makes the product work there: clinic, shop, and brand deployments.

At BariAccess I sit with Bariatric Associates as one of two primary engineers on TREI, a GLP-1 and metabolic-care platform: patient site, iPhone app, staff console, API, and a fail-closed Azure OpenAI assistant. The work is last-mile: identity, consults, membership, wearable custody, and changing the product when office workflow disagrees with the first design.

The same loop shows up at Alex Road Service — a public site plus more than 20 operations screens, then intake, user-acceptance testing with real staff, role-based training, and hypercare so the platform can be duplicated for the next shop — and at Insightful Care, a live telepsychiatry site for a New Jersey practice.

I am looking for a seat where the job is to make the product true in someone else's building. Thank you for considering my application. I can be reached at (908) 230-6948 or zakiymanigo@gmail.com.

Sincerely,

Zakiy T. Manigo
