Re: Data & AI Platform Engineer (JR104191)

Dear Recruiting Team:

I am writing to apply for the Data & AI Platform Engineer role. The posting is an early-career seat on platform reliability: environments, CI/CD, runbooks, least-privilege access, and generative AI that is allowed to fail closed. That matches the work I do on Azure staging for TREI and the delivery pipelines I run for client systems. I am based in the New York area.

At BariAccess I help operate TREI on Azure Container Apps with Entra, Key Vault, and Service Bus, and a guarded Azure OpenAI assistant whose keys never live in the client. When the model is wrong, public surfaces stay fail-closed, and the recovery path is written down. My core platforms are Azure, Git, and CI/CD. I have not operated Microsoft Fabric, Snowflake, or Databricks in production, and I would expect to learn those under the mentorship the role describes.

The requisition asks for a year of representative accounting experience, including implementing systems. I implemented the financial loop a shop closes on (estimates, invoices, Stripe payments and refunds) and a tax-record organizer for freelancers. That is systems implementation, not a year as an accountant.

Thank you for considering my application. I can be reached at (908) 230-6948 or zakiymanigo@gmail.com and look forward to discussing how I can support the data and AI platform team.

Sincerely,

Zakiy T. Manigo
