Re: AI and automation consulting (Automation and Application Consulting)

Dear Recruiting Team:

I am writing about AI and automation work in Armanino's Automation and Application Consulting practice: custom AI engineering, workflow automation, and the last mile that turns a model or a scheduled job into something a client will run. There is not a junior requisition with that exact title on the board today; this letter is for that seat, including Introduce Yourself.

Your practice is recognized for pairing accounting and software consulting, including Microsoft Inner Circle recognition and a growing set of AI and integration offerings. I want to be the person who implements that loop with clients: grounded models, approval paths, and automations with an off switch.

At FITD I put Gemini in the product, Vertex virtual try-on behind a Cloud Function, and community bots with approval, quotas, moderation, and a kill switch. Growth operations run as automations: catalog import, an Instagram CRM on GPT-4o, and n8n posting workflows. At BariAccess the clinic assistant is fail-closed Azure OpenAI, and a worker with an outbox automates wearable pulls, scheduling, and payment events so the clinic path does not depend on a person clicking every step. I have not implemented UiPath, Power Automate, or ServiceNow; my evidence is applied models and job-based automation with explicit failure handling.

Thank you for considering this packet. I can be reached at (908) 230-6948 or zakiymanigo@gmail.com and would welcome a conversation with the New York practice.

Sincerely,

Zakiy T. Manigo
