Hiring Team
Brellium
New York, NY

Re: Software Engineer

Dear Hiring Team:

I am writing to apply for the Software Engineer role. Brellium is putting LLMs into the visit so clinical and compliance risk is caught before it reaches the patient. That is the work I want: backend and full-stack systems where the model is useful and the record stays in code.

At BariAccess I am one of two primary engineers on TREI, a GLP-1 and metabolic-care platform for a clinic. PostgreSQL is the system of record. A worker and transactional outbox take wearable, scheduling, and payment events into that database with idempotent handlers and versioned migrations. ABA, the clinic assistant, runs on Azure OpenAI. Medical-claim checks live in code, voice and text share one policy path, and the model cannot become the chart. Staging runs on Azure Container Apps, with tests and CI on the release path.

I also ship Python and TypeScript around that clinic work. At FITD AI I built a Next.js 14 admin CRM and Python automations, including a Flask and SQLite CRM that calls GPT-4o, plus Gemini and Vertex features behind a Cloud Function so keys stay on the server. I am based in New York / New Jersey and can work the New York hybrid schedule.

Thank you for considering my application. I can be reached at (908) 230-6948 or zakiymanigo@gmail.com and look forward to discussing the role.

Sincerely,

Zakiy T. Manigo
